Re: VPDES Permit No. VA0076392, Little Falls Run WWTP

Dear Ms. Thompson:

Enclosed is a reapplication for the referenced permit. The following forms as well as supplemental information are enclosed:

- General Form 1 General Information
- NPDES Form 2A Application For Permit to Discharge Municipal Waste From POTWs
- VPDES Sewage Sludge Permit Application Form
- Public Billing Information Form
- VPDES Permit Application Addendum

If you need additional information, please contact Janet L. Spencer, Deputy Director of Utilities at (540) 658-5120 or JSpencer@staffordcountyva.gov

Sincerely.

Michael T. Smith Director of Utilities

|---|------|---|--|--|--|--|
| PAF | et e | B. ADDITIONAL APPLICATION INFORMATION FOR APPLICANTS WITH A DESIGN FLOW GREATER THAN OR EQUAL TO 0.1 MGD (100,000 gallons per day). | | | | |
| All a | ppli | cants with a design flow rate ≥ 0.1 mgd must answer questions B.1 through B.6. All others go to Part C (Certification). | | | | |
| B.1. Inflow and Infiltration. Estimate the average number of gallons per day that flow into the treatment works from inflow and/or infile 250,000 gpd | | | | | | |
| | Br | iefly explain any steps underway or planned to minimize inflow and infiltration. | | | | |
| | | ngoing collection system survey to identify sources of I&I. | | | | |
| | _ | | | | | |
| B.2. | Th | pographic Map. Attach to this application a topographic map of the area extending at least one mile beyond facility property boundaries. is map must show the outline of the facility and the following information. (You may submit more than one map if one map does not show a entire area.) | | | | |
| | a. | The area surrounding the treatment plant, including all unit processes. | | | | |
| | b. | The major pipes or other structures through which wastewater enters the treatment works and the pipes or other structures through which treated wastewater is discharged from the treatment plant. Include outfalls from bypass piping, if applicable. | | | | |
| | C. | Each well where wastewater from the treatment plant is injected underground. | | | | |
| | d. | Wells, springs, other surface water bodies, and drinking water wells that are: 1) within 1/4 mile of the property boundaries of the treatment works, and 2) listed in public record or otherwise known to the applicant. | | | | |
| | e. | Any areas where the sewage sludge produced by the treatment works is stored, treated, or disposed. | | | | |
| | f. | If the treatment works receives waste that is classified as hazardous under the Resource Conservation and Recovery Act (RCRA) by truck, rail, or special pipe, show on the map where that hazardous waste enters the treatment works and where it is treated, stored, and/or disposed. | | | | |
| B.3. | bac | cess Flow Diagram or Schematic. Provide a diagram showing the processes of the treatment plant, including all bypass piping and all ekup power sources or redundancy in the system. Also provide a water balance showing all treatment units, including disinfection (e.g., or | | | | |
| B.4. | Op | eration/Maintenance Performed by Contractor(s). | | | | |
| | Are | any operational or maintenance aspects (related to wastewater treatment and effluent quality) of the treatment works the responsibility of a tractor? | | | | |
| | If y | es, list the name, address, telephone number, and status of each contractor and describe the contractor's responsibilities (attach additional ges if necessary). | | | | |
| | Na | ne: Recyc Systems,Inc | | | | |
| | Ма | iling Address: P.O Box 562 Remington. Va 22734 | | | | |
| | Tel | ephone Number: (540) 547-3300 | | | | |
| | Re | sponsibilities of Contractor: Transport dewatered sludge and land apply | | | | |
| B.5. | und | neduled Improvements and Schedules of Implementation. Provide information on any uncompleted implementation schedule or completed plans for improvements that will affect the wastewater treatment, effluent quality, or design capacity of the treatment works. If the atment works has several different implementation schedules or is planning several improvements, submit separate responses to question for each. (If none, go to question B.6.) | | | | |
| | a. | List the outfall number (assigned in question A.9) for each outfall that is covered by this implementation schedule. | | | | |
| | | 001 (Adding U.V. lights, digesters, upgrading bar racks and aeration systems | | | | |
| | b. | Indicate whether the planned improvements or implementation schedule are required by local, State, or Federal agencies. | | | | |
| | | Yes ✓ No | | | | |

SUPPLEMENTAL APPLICATION INFORMATION

PART D. EXPANDED EFFLUENT TESTING DATA

Refer to the directions on the cover page to determine whether this section applies to the treatment works.

Effluent Testing: 1.0 mgd and Pretreatment Treatment Works. If the treatment works has a design flow greater than or equal to 1.0 mgd or it has (or is required to have) a pretreatment program, or is otherwise required by the permitting authority to provide the data, then provide effluent testing data for the following pollutants. Provide the indicated effluent testing information and any other information required by the permitting authority for each outfall through which effluent is discharged. Do not include information on combined sewer overflows in this section. All information reported must be based on data collected through analyses conducted using 40 CFR Part 136 methods. In addition, these data must comply with QA/QC requirements of 40 CFR Part 136 and other appropriate QA/QC requirements for standard methods for analytes not addressed by 40 CFR Part 136. Indicate in the blank rows provided below any data you may have on pollutants not specifically listed in this form. At a minimum, effluent testing data must be based on at least three pollutant scans and must be no more than four and one-half years old.

Outfall number: See Atachments (Complete once for each outfall discharging effluent to waters of the United States.)

Form Approved 1/14/99 OMB Number 2040-0086

SUPPLEMENTAL APPLICATION INFORMATION

PART E. TOXICITY TESTING DATA

POTWs meeting one or more of the following criteria must provide the results of whole effluent toxicity tests for acute or chronic toxicity for each of the facility's discharge points: 1) POTWs with a design flow rate greater than or equal to 1.0 mgd; 2) POTWs with a pretreatment program (or those that are required to have one under 40 CFR Part 403); or 3) POTWs required by the permitting authority to submit data for these parameters.

- At a minimum, these results must include quarterly testing for a 12-month period within the past 1 year using multiple species (minimum of
 two species), or the results from four tests performed at least annually in the four and one-half years prior to the application, provided the
 results show no appreciable toxicity, and testing for acute and/or chronic toxicity, depending on the range of receiving water dilution. Do
 not include information on combined sewer overflows in this section. All information reported must be based on data collected through
 analysis conducted using 40 CFR Part 136 methods. In addition, this data must comply with QA/QC requirements of 40 CFR Part 136
 and other appropriate QA/QC requirements for standard methods for analytes not addressed by 40 CFR Part 136.
- In addition, submit the results of any other whole effluent toxicity tests from the past four and one-half years. If a whole effluent toxicity
 test conducted during the past four and one-half years revealed toxicity, provide any information on the cause of the toxicity or any results
 of a toxicity reduction evaluation, if one was conducted.
- If you have already submitted any of the information requested in Part E, you need not submit it again. Rather, provide the information requested in question E.4 for previously submitted information. If EPA methods were not used, report the reasons for using alternate methods. If test summaries are available that contain all of the information requested below, they may be submitted in place of Part E.

SUPPLEMENTAL APPLICATION INFORMATION

PART F. INDUSTRIAL USER DISCHARGES AND RCRA/CERCLA WASTES All treatment works receiving discharges from significant industrial users or which receive RCRA, CERCLA, or other remedial wastes must complete Part F. **GENERAL INFORMATION:** F.1. Pretreatment Program. Does the treatment works have, or is it subject to, an approved pretreatment program? F.2. Number of Significant Industrial Users (SIUs) and Categorical Industrial Users (CIUs). Provide the number of each of the following types of industrial users that discharge to the treatment works. a. Number of non-categorical SIUs. b. Number of CIUs. SIGNIFICANT INDUSTRIAL USER INFORMATION: Supply the following information for each SIU. If more than one SIU discharges to the treatment works, copy questions F.3 through F.8 and provide the information requested for each SIU. F.3. Significant Industrial User Information. Provide the name and address of each SIU discharging to the treatment works. Submit additional pages as necessary. Colonial Circuits, Inc. Name: Mailing Address: 1026 Warrenton Rd Fredericksburg, Virginia 22405 F.4. Industrial Processes. Describe all of the industrial processes that affect or contribute to the SIU's discharge. Printed circuit board manufacturing F.5. Principal Product(s) and Raw Material(s). Describe all of the principal processes and raw materials that affect or contribute to the SIU's discharge. Principal product(s): Printed circuit boards, electorplating Raw material(s): copper, silver, nickle, tin, lead F.6. Flow Rate. a. Process wastewater flow rate. Indicate the average daily volume of process wastewater discharged into the collection system in gallons per day (gpd) and whether the discharge is continuous or intermittent. 9,000 _continuous or ___ intermittent) gpd b. Non-process wastewater flow rate. Indicate the average daily volume of non-process wastewater flow discharged into the collection system in gallons per day (gpd) and whether the discharge is continuous or intermittent. continuous or / intermittent) F.7. Pretreatment Standards. Indicate whether the SIU is subject to the following: a. Local limits No b. Categorical pretreatment standards If subject to categorical pretreatment standards, which category and subcategory? 433 Metal Finishing

SUPPLEMENTAL APPLICATION INFORMATION

PART G. COMBINED SEWER SYSTEMS

If the treatment works has a combined sewer system, complete Part G.

- G.1. System Map. Provide a map indicating the following: (may be included with Basic Application Information)
 - a. All CSO discharge points.
 - b. Sensitive use areas potentially affected by CSOs (e.g., beaches, drinking water supplies, shellfish beds, sensitive aquatic ecosystems, and outstanding natural resource waters).
 - c. Waters that support threatened and endangered species potentially affected by CSOs.
- **G.2.** System Diagram. Provide a diagram, either in the map provided in G.1. or on a separate drawing, of the combined sewer collection system that includes the following information:
 - a. Locations of major sewer trunk lines, both combined and separate sanitary.
 - b. Locations of points where separate sanitary sewers feed into the combined sewer system.
 - c. Locations of in-line and off-line storage structures.
 - d. Locations of flow-regulating devices.
 - e. Locations of pump stations.

VPDES SEWAGE SLUDGE PERMIT APPLICATION FORM

SCREENING INFORMATION

This application is divided into four sections. Section A pertains to all applicants. The applicability of Sections B, C and D depends on your facility's sewage sludge use or disposal practices. The information provided on this page will help you determine which sections to fill out.

| 1. | All applicants must complete Section A (General Information). |
|----|--|
| 2. | Does this facility generate sewage sludge? X Yes No |
| | Does this facility derive a material from sewage sludge?Yes _X No |
| | If you answered "Yes" to either, complete Section B (Generation Of Sewage Sludge or Preparation Of A Material Derived From Sewage Sludge). |
| 3. | Does this facility apply sewage sludge to the land? YesX _ No |
| | Is sewage sludge from this facility applied to the land? X Yes No |
| | If you answer "No" to all above, skip Section C. |
| | If you answered "Yes" to either, answer the following three questions: |
| | Does the sewage sludge from this facility meet the ceiling concentrations, pollutant concentrations, Class A pathogen reduction requirements and one of the vector attraction reduction requirements 1-8, as identified in the instructions? Yes X No |
| | b. Is sewage sludge from this facility placed in a bag or other container for sale or give-away for application to the land? Yes _XNo |
| | c. Is sewage sludge from this facility sent to another facility for treatment or blending?Yes _XNo |
| | If you answered "No" to all three, complete Section C (Land Application Of Bulk Sewage Sludge). |
| | If you answered "Yes" to a, b or c, skip Section C. |
| 4. | Do you own or operate a surface disposal site?Yes _XNo |
| | If "Yes", complete Section D (Surface Disposal). |

|-----------------------|----------------------|-----------------------|------|-----------|

SECTION A. GENERAL INFORMATION

All applicants must complete this section.

1.

2.

3.

| Fa | cility Information. |
|----|---|
| a. | Facility name: Little Falls Run Wastewater Treatment Facility |
| b. | Contact person: |
| | Title: Deputy Director of Utilities |
| | Phone: (_ <u>540</u>) <u>658-8620</u> |
| c. | Mailing address: |
| | Street or P.O. Box: P.O. Box 339 |
| | City or Town: Stafford State: VA Zip: 22555-0339 |
| d. | Facility location: |
| | Street or Route #: 100 Michael Scott Lane |
| | County: Stafford County |
| | City or Town: State: <u>VA</u> Zip: <u>22405</u> |
| e. | Is this facility a Class I sludge management facility? X Yes No |
| f. | Facility design flow rate: 8.0 mgd |
| g. | Total population served: 38,384 |
| h. | Indicate the type of facility: |
| | X_ Publicly owned treatment works (POTW) |
| | Privately owned treatment works |
| | Federally owned treatment works |
| | Blending or treatment operation |
| | Surface disposal site |
| | Other (describe): |
| Ap | plicant Information. If the applicant is different from the above, provide the following: |
| a. | Applicant name: Stafford County Board of Supervisors |
| b. | Mailing address: |
| | Street or P.O. Box: P.O. Box 339 |
| | City or Town: Stafford State: VA Zip: 22555-0339 |
| c. | Contact person: Anthony J. Romanello |
| | Title: County Administrator |
| | Phone: (_540_) _658-8605_ |
| d. | Is the applicant the owner or operator (or both) of this facility? |
| | X owner X operator |
| e. | Should correspondence regarding this permit be directed to the facility or the applicant? facility x applicant |
| Pe | rmit Information. |
| a. | Facility's VPDES permit number (if applicable): <u>VA0076392</u> |
| b. | List on this form or an attachment, all other federal, state or local permits or construction approvals received or applied for that regulate this facility's sewage sludge management practices: |
| | Permit Number: Type of Permit: |
| | <u>NA</u> |
| | |

| 4. Indian Country. Does any generation, treatment, storage, application to land or disposal of sewage sludge from facility occur in Indian Country? Yes _X_ No If "Yes", describe: | | | | | | |
|--|---|--|--|--|--|--|
| 5. | Topographic Map. Provide a topographic map or maps (or other appropriate maps if a topographic map is unavailable) that shows the following information. Maps should include the area one mile beyond all property boundaries of the facility: | | | | | |
| | a. Location of all sewage sludge management facilities, including locations where sewage sludge is generated, stored, treated, or disposed. b. Location of all wells, springs, and other surface water bodies listed in public records or otherwise known to the applicant within 1/4 mile of the property boundaries. | | | | | |
| 6. | Line Drawing. Provide a line drawing and/or a narrative description that identifies all sewage sludge processes that will be employed during the term of the permit including all processes used for collecting, dewatering, storing, or treating sewage sludge, the destination(s) of all liquids and solids leaving each unit, and all methods used for pathogen reduction and vector attraction reduction. | | | | | |
| 7. | Contractor Information. Are any operational or maintenance aspects of this facility related to sewage sludge generation, treatment, use or disposal the responsibility of a contractor? X Yes No | | | | | |
| | If "Yes", provide the following for each contractor (attach additional pages if necessary). | | | | | |
| | Name: Recyc Systems Inc. | | | | | |
| | Mailing address: | | | | | |
| | Street or P.O. Box: P.O Box 562 | | | | | |
| | City or Town: Remington State: Va Zip: 22734 | | | | | |
| | Phone: (_ <u>540</u> _)_547-3300 | | | | | |
| | Contractor's Federal, State or Local Permit Number(s) applicable to this facility's sewage sludge: | | | | | |
| | See Attachments | | | | | |

If the contractor is responsible for the use and/or disposal of the sewage sludge, provide a description of the service to be provided to the applicant and the respective obligations of the applicant and the contractor(s).

8. Pollutant Concentrations. Using the table below or a separate attachment, provide sewage sludge monitoring data for the pollutants which limits in sewage sludge have been established in 9 VAC 25-31-10 et seq. for this facility's expected use or disposal practices. All data must be based on three or more samples taken at least one month apart and must be no more than four and one-half years old.

| POLLUTANT | CONCENTRATION (mg/kg dry weight) | SAMPLE DATE | ANALYTICAL METHOD | DETECTION LEVEL FOR ANALYSIS |
|------------|----------------------------------|----------------|----------------------|------------------------------|
| Arsenic | 4.75 | 1/14 - 12/14 | SM846 - 7061A | 0.2 |
| Cadmium | 2.0 | 1/14 - 12/14 | SM846 - 6010B | 7 |
| Chromium | No Data | 1/14 - 12/14 | | |
| Copper | 391.75 | 1/14 - 12/14 | SM846 - 6010B | 1 |
| Lead | 20.75 | 1/14 - 12/14 | SM846 - 6010B | 5 |
| Mercury | 1.5 | 1/14 - 12/14 | SM846 - 7741A | 0.2 |
| Molybdenum | 6.5 | 1/14 - 12/14 | SM846 - 6010B | 5 |
| Nickel | 29.0 | 1/14 - 12/14 | SM846 - 6010B | 5 |
| Selenium | 5.25 | 1/14 - 12/14 | SM846 - 7741A | 0.1 |
| Zinc | 781.25 | 1/14 - 12/14 | SM846 - 6010B | 1 |

d. Provide a soil survey map, preferably photographically based, with the field boundaries clearly marked. (A USDA-SCS soil survey map should be provided, if available.)

Provide a detailed legend for each soil survey map which uses accepted USDA-SCS descriptions of the typifying pedon for each soil series (soil type). Complex associations may be described as a range of characteristics. Soil descriptions shall include as a minimum the following information.

- 1) Soil symbol
- 2) Soil series, textural phase and slope range
- 3) Depth to seasonal high water table
- 4) Depth to bedrock
- 5) Estimated soil productivity group (for the proposed crop rotation)

Item e - h are required for sites receiving frequent application of sewage sludge

- e. In order to verify the information provided in item d, characterize the soil at each land application site. Representative soil borings or test pits to a depth of five feet or to bedrock if shallower, are to be coordinated for the typifying pedon of each soil series (soil type). Soil descriptions shall include as a minimum the following information:
 - Soil symbol
 - 2) Soil series, textural phase and slope range
 - 3) Depth to seasonal high water table
 - 4) Depth to bedrock
 - 5) Estimated soil productivity group (for the proposed crop rotation)
- f. Collect and analyze soil samples from each field, weighted to best represent each of the soil borings performed for Item e. Using the table below or a separate attachment, provide at least one analysis per sample for each of the following parameters.

- g. Relate the crop nutrient needs to anticipated yields, soil productivity rating and the various fertilizer or nutrient sources from sludge and chemical fertilizers. Describe any specialized agronomic management practices which may be required as a result of high soil pH. If the sludge is expected to possess an unusually high CCE or other unusual properties, provide a description of any plant tissue testing, supplemental fertilization or intensive agronomic management practices which may be necessary.
- h. Using a narrative format and referencing any related charts, describe the proposed cropping system. Show how the crop rotation and management will be coordinated with the design of the land application system. Include any supplemental fertilization program, soil testing and the coordination of tillage practices, planting and harvesting schedules and timing of land application.

Sludge Treatment Schematic For LFRWWTF

The sludge is aerobically treated in the aerated sludge storage silos, dried in the Centrifuge and transported to the sludge storage. The sludge is then taken from the sludge storage periodically and land applied.

Little Falls Run has a certificate to operate at a rate of 8.0 MGD and produces approximately 5,500 wet tons of biosolids per year.

NOTICE AND NECESSARY INFORMATION (NANI)

This form is to assist in complying with the bulk sewage sludge (biosolids) notification requirements [503.12(f)]. Please note, however, that if the biosolids meet the exceptional quality criteria, then the notification requirements do not apply. This form can be used by preparers of biosolids to transmit information to land appliers and also by land appliers to transmit information to land owners or lease holders.

Facility and Biosolids Type: Little Falls Run WWTF Sewage Sludge

Monitoring Period: From 01 / 01 /2014 To 03 / /31 /2014

To be Completed by PREPARERS of Biosolids

A. Please provide pollutant concentrations

RE: DEQ Comments regarding the permit application received on February 18, 2015

Good Morning Anna

Sorry it has taken awhile to get back to you on this but I needed to clarify our landfill solids disposal option.

- 1. 2 A Parts A.12 Data was collected from Jan 2012 to April 2014
- 2. 2A Parts B.6 Data From July 2014
- 3. QL for cBOD5 is 5.0
- 4. Landfill bio solids disposal is not an option for us. We have never been permitted to dispose at the landfill. Our sludge management plan only allows for land application with Recyc Systems handling our current contract.

If you need any further information please let me know. Thanks!

Brian Green

Plant Manager Little Falls Run WWTF Stafford County (540)658-5120 bgreen@co.stafford.va.us

Subject: DEQ Comments regarding the permit application received on February 18, 2015

Good Morning,

DEQ-NRO has reviewed the permit application received on February 18, 2015 and has the following comments:

- 1. In EPA Form 2A, Parts A.12 and B.6, please indicate the time period in which the samples were taken.
- 2. Please indicate the QL used for cBOD₅ analysis.
- 3. Should the facility contact for the treatment plant be Brian Green, Janet Spencer, or Michael Smith?
- 4. If landfill disposal is used as a backup for biosolids removal, it should be indicated on the VPDES Sewage Sludge Permit Application Form.

Could you please respond by March 23, 2014?

Thanks,

Anna

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

hjones@co.stafford.va.us

Date Sent: 05/14/12

HRSD CEL, Central Environmental Laboratory is VELAP/NELAC accredited by DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011 Effective Date: March 23, 2012 Expiration Date: June 14, 2012 Certificate # 1465

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact
Danny Barker, TSD Environmental Scientist at (757) 460-4247

² 1,2-Diphenylhydrazine gets converted to Azobenzene in the extraction process.

³ N-Nitrosodiphenylamine decomposes in the injection port to Diphenylamine.

Notes

Authorization: Rolum Parnell Lab Manager QA Manager Date: 5/14/12

¹ Report Limit is lowest concentration at which quantitation is demonstrated.

² 1,2-Diphenylhydrazine gets converted to Azobenzene in the extraction process.

³ N-Nitrosodiphenylamine decomposes in the injection port to Diphenylamine.

04/24/13 - Stafford County - Little Falls - Permit Application

This analytical report contains 11 pages

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

Date Sent:

05/22/13

hjones@co.stafford.va.us

HRSD CEL, Central Environmental Laboratory is VELAP/NELAC accredited DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011 Effective Date: June 15, 2012 Expiration Date: June 14, 2013 Certificate # 1612

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact
Danny Barker, TSD Environmental Scientist at (757) 460-4247

Notes:

However, the recoveries of these surrogates were within acceptable limits in Method Blank, Laboratory Control Sample and FNE sample. The percent recovery of the sample matrix spike and matrix duplicate were also within acceptable limits.

Report Limit is lowest concentration at which quantitation is demonstrated.

Acid surrogate recoveries were below the acceptable limits due to possible analytical procedural error.

07/08/13 - Stafford County - Little Falls - Permit Application - Resample Hg

This analytical report contains 5 pages

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

hjones@co.stafford.va.us

Date Sent:

07/24/13

HRSD CEL, Central Environmental Laboratory is VELAP/NELAC accredited by DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011 Effective Date: June 15, 2013 Expiration Date: June 14, 2014 Certificate # 2354

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact Danny Barker, TSD Environmental Scientist at (757) 460-4247

RECORD (S)

Little Falls VPDES Field Sheet

Information To Be Checked Before The Start of Each Sampling Event

| 1. | Does the Final Effluent have any abnormal characteristics (odor, color)? Y/N |
|-----|---|
| ٠ | If the answer to the above questions is NO proceed to the next section. Please contact a supervisor if the answer is YES. |
| 2. | A. Average Plant flow for the last five days: ~2.6 MGD B. Expected Plant flow for the next 24 hours: 2.8 MGD |
| 3. | List the last three days of Final Effluent TSS with the most recent last: 0.7 mg/L, 2.0 mg/L, |
| 4. | Contact Closure: (Expected Flow //0000 / 30) Pulses per sample. |
| 5. | Samplers for Final Effluent & FB calibrated at 550 ml per sample. (Desired volume/30) Final Effluent Start Time / Date: |
| Th | e above information has been completed prior to the beginning of the sampling event. Int. |
| Saı | mpling personnel: M. W.z.sins, J. Restz, |
| | Information Check At The End Of The Sampling Event |
| 1. | Are all lids, compression assemblies and caps secure (Y) N |
| 2. | Final Effluent TSS for the sampling period: 0.1 mg/L 0.6 mg/L |
| 3. | Plant flow for the sampling period 2.561 MGD 3.279 MGD |
| 4. | Number of samples collected in each Final Effluent & FB composite container: Final Effluent: 29 FB: 29 |
| 5. | Final Effluent & FB composite end time and date: Final Effluent End Time / Date: FB End Time / Date: 1050 073114 |
| | Is Temperature in collection container at the end of sampling <6° C? \(\infty \) / N |
| 7. | Are sample volumes equal in all composite containers? N |
| 8. | Grab times and dates: FB VOA: |
| Sar | npling personnel: M. Wiggins, J. Reitz, |
| *** | Please contact project lead with any problems incurred during the sampling event. |
| Rec | cord any other information that could affect sample results: |

04/25/12 - Stafford County - Little Falls - Permit Application

This analytical report contains 11 pages

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

hjones@co.stafford.va.us

Date Sent: 05/14/12

HRSD CEL, Central Environmental Laboratory is VELAP/NELAC accredited by DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011 Effective Date: March 23, 2012 Expiration Date: June 14, 2012 Certificate # 1465

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact
Danny Barker, TSD Environmental Scientist at (757) 460-4247

<u>dbarker@hrsd.com</u>

Robin Parnell, CEL Laboratory Manager at (757) 460-4203.

² 1,2-Diphenylhydrazine gets converted to Azobenzene in the extraction process.

³ N-Nitrosodiphenylamine decomposes in the injection port to Diphenylamine.

Notes

Authorization: Rolum Parnell Lab Manager QA Manager Date: 5/14/12

¹ Report Limit is lowest concentration at which quantitation is demonstrated.

² 1,2-Diphenylhydrazine gets converted to Azobenzene in the extraction process.

³ N-Nitrosodiphenylamine decomposes in the injection port to Diphenylamine.

04/24/13 - Stafford County - Little Falls - Permit Application

This analytical report contains 11 pages

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

Date Sent:

05/22/13

hjones@co.stafford.va.us

DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011 Effective Date: June 15, 2012 Expiration Date: June 14, 2013 Certificate # 1612

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact Danny Barker, TSD Environmental Scientist at (757) 460-4247 dbarker@hrsd.com Robin Parnell, CEL Laboratory Manager at (757) 460-4203. rparnell@hrsd.com

Notes:

However, the recoveries of these surrogates were within acceptable limits in Method Blank, Laboratory Control Sample and FNE sample. The percent recovery of the sample matrix spike and matrix duplicate were also within acceptable limits.

Report Limit is lowest concentration at which quantitation is demonstrated.

Acid surrogate recoveries were below the acceptable limits due to possible analytical procedural error.

Notes

Report Limit is lowest concentration at which quantitation is demonstrated.

² 1,3-Dichloropropylene is the total of cis-1,3-Dichloropropylene and trans-1,3-Dichloropropylene.

This analytical report contains 5 pages

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

hjones@co.stafford.va.us

Date Sent:

07/24/13

HRSD CEL, Central Environmental Laboratory is VELAP/NELAC accredited by DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011 Effective Date: June 15, 2013 Expiration Date: June 14, 2014 Certificate # 2354

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact Danny Barker, TSD Environmental Scientist at (757) 460-4247

dbarker@hrsd.com

Robin Parnell, CEL Laboratory Manager at (757) 460-4203.

RECORD (S)

Little Falls VPDES Field Sheet

Information To Be Checked Before The Start of Each Sampling Event

| 1. | Does the Final Effluent have any abnormal characteristics (odor, color)? Y /(N) |
|-----|---|
| | If the answer to the above questions is NO proceed to the next section. Please contact a supervisor if the answer is YES. |
| 2. | A. Average Plant flow for the last five days: 2.835 mgcl B. Expected Plant flow for the next 24 hours: 2.835 mgcl |
| 3. | List the last three days of Final Effluent TSS with the most recent last: 1.0 mg/L, 1.0 mg/L, |
| 4. | Contact Closure: (Expected Flow /10,000 / 20) 14.175→14 Pulses per sample. |
| 5. | Samplers for Final Effluent & FB calibrated at 600 ml per sample. (Desired volume/20) Final Effluent Start Time / Date: 1202 / 070813 Calibrated to: 600 ml FB Start Time / Date: 1202/070813 Calibrated to: 600 ml |
| The | e above information has been completed prior to the beginning of the sampling event. Int. MB |
| Sar | npling personnel: M. Bertsch.,, |
| | Information Check At The End Of The Sampling Event |
| 1. | Are all lids, compression assemblies and caps secure? (Y)/ N |
| 2. | Final Effluent TSS for the sampling period: 20 mg/L |
| 3. | Plant flow for the sampling period 2.884 mga |
| 4. | Number of samples collected in each Final Effluent & FB composite container: Final Effluent: 21 FB: 21 |
| 5. | Final Effluent & FB composite end time and date: Final Effluent End Time / Date: 1202 / 070913 FB End Time / Date: 1202 / 070913 |
| 6. | Is Temperature in collection container at the end of sampling <6° C? N |
| 7. | Are sample volumes equal in all composite containers / / N |
| 8. | Grab times and dates: FNE VOA:N/A |
| Sa | npling personnel: M. Berste,, |
| | Please contact project lead with any problems incurred during the sampling event. |
| Re | cord any other information that could affect sample results: |

07/31/14 - Stafford County - Little Falls - Permit Application 2A

This analytical report contains 19 pages

Hugh Jones Laboratory Supervisor County of Stafford 950 Kings Highway Fredericksburg, VA 22405

hjones@co.stafford.va.us

Danny Barker, TSD Environmental Scientist

dbarker@hrsd.com

Date Sent:

08/26/14

HRSD CEL, Central Environmental Laboratory is VELAP/NELAC accredited by DCLS, the Division of Consolidated Laboratory Services.

VA Laboratory ID#: 460011

Analytical test results meet all requirements of VELAP/NELAC unless otherwise noted under the analysis.

Test results relate only to the sample tested. Clients should be aware that a critical step in chemical or microbiological analysis is the collection of the sample.

This report may not be reproduced, except in full, without written approval from HRSD.

If you have any questions concerning this report, please do not hesitate to contact Danny Barker, TSD Environmental Scientist at (757) 460-4247 dbarker@hrsd.com

Robin Parnell, CEL Laboratory Manager at (757) 460-4203. rparnell@hrsd.com

Cindi Reno, CEL/MAP Coordinator at (757) 460-4205.

RECORD (S)

Little Falls VPDES Field Sheet

Information To Be Checked Before The Start of Each Sampling Event

| 1. Does the Final Effluent have any abnormal characteristics (odor, color)? Y/N | |
|--|------------|
| If the answer to the above questions is NO proceed to the next section. Please contact a supervisor if the answer is YES | S . |
| 2. A. Average Plant flow for the last five days: ~ 2.6 MGD B. Expected Plant flow for the next 24 hours: 2.8 MGD | |
| 3. List the last three days of Final Effluent TSS with the most recent last: 0.7 mg/L, 2.0 mg/L | . |
| 4. Contact Closure: (Expected Flow //ocot/30) Pulses per sample. | |
| 5. Samplers for Final Effluent & FB calibrated at 550 ml per sample. (Desired volume/30) Final Effluent Start Time / Date: /050 / 073014 Calibrated to: 550 ml FB Start Time / Date: /050 / 073014 Calibrated to: 550 ml | - |
| The above information has been completed prior to the beginning of the sampling event. Int. | |
| Sampling personnel: M. Wzzins, J. Restz, | |
| Information Check At The End Of The Sampling Event | |
| 1. Are all lids, compression assemblies and caps secure (Y) N | |
| 2. Final Effluent TSS for the sampling period: 0.1 mg/L 0.6 mg/L | |
| 3. Plant flow for the sampling period 2.561 MGD 3.27 9 MGD | |
| 4. Number of samples collected in each Final Effluent & FB composite container: Final Effluent: FB: | |
| 5. Final Effluent & FB composite end time and date: Final Effluent End Time / Date: FB End Time / Date: 650 6731 4 | |
| 6. Is Temperature in collection container at the end of sampling <6° C? \(\delta \) / N | - |
| 7. Are sample volumes equal in all composite containers? N | |
| 8. Grab times and dates: FB VOA: | - |
| Sampling personnel: MeWizzins, J. Reitz, | |
| Please contact project lead with any problems incurred during the sampling event. | |
| Record any other information that could affect sample results: | |
| | |
| | |
| | |
| | |
| | |
